Hard water is water that has been untouched by any chemical process. This leads to the water gaining unwanted elements as it flows through the pipes, before it exits through your tap. Hard water can be temporary or permanent.

Water is softened when calcium and magnesium—the hardness ions—are collected. However, the minerals found in hard water can be detected in the taste, and so some people may find that it is slightly bitter, whereas soft water has a very pure, although occasionally very slightly salty taste. The lather is not as rich and bubbly.

First, find a see-through container like an empty plastic water bottle. The timing of regeneration depends on the type of softener you .
